

FIVE STAR ELECTRIC

POWERED BY INNOVATION

| | |
|---------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>Low & Medium Voltage AC Variable Frequency Drives 230VAC-15kV through 20,000HP, air cooled & water cooled assemblies. Integrated packages with Input & Bypass Assemblies, PLC's, and Heat Exchanges. Low and Medium Voltage AC and DC Power Supplies. Specialist for applying drives to eliminating voltage and current power quality issues at the source.</p> |
|  | <p>Liquid Filled Transformers from 5MVA-30MVA through 69kV. The strength of Niagara Transformer is flexibility and responsiveness combined with vast experience and technical capability. Whether providing standard products or engineered-to-order designs, they are dedicated to ensuring that the customer has the best transformer for the application.</p> |
|  | <p>Low & Medium Voltage Solid State Starters from 208VAC-15kv through 30,000HP for Induction & synchronous motors. Standard and built-to-order products include a range of solid state starters, full voltage electromechanical controls, synchronous exciters and variable speed drives.</p> |
|  | <p>Manufacturers of large, prefabricated enclosures for remote instrumentation, power distribution centers, SCR houses, analyzer shelters and RTUs. Additional products include laser marked nameplates, truck mounted generator enclosures, stairs, platforms, support brackets, hangers, cover plates, CT weather heads, buss gutter and numerous other custom fabricated parts.</p> |
|  | <p>Foxboro. Avantis. SimSci. Triconex. Wonderware. Schneider Electric is a provider of automation controls and process solutions that will increase productivity, reduce waste, remove cost and boost profitability while demonstrating measurable improvement in overall performance. Schneider Electric offers products and services, expertise and technologies that maximize return on investments conserve resources and optimize performance.</p> |
|  <p>imagination at work</p> | <p>GE is a world-class manufacture of electric motors and generators with more than 125 years of experience. GE offers a full range of products from fractional to 100,000 horsepower units, for highly demanding applications in industrial and commercial industries around the world.</p> |
| <p>T-STAR ENGINEERING</p> | <p>Medium Voltage Static VAR Compensation Systems for all industries. Improves substation or plant power quality. Resolves power issues such as voltage "Flicker" and "Sag" due to weak power supplies or motor starting. Improves plant or substation power factor. 5kv, 12kv, 13kv & 14kv class.</p> |
|  | <p>UL 508A, UL 698A and UL Hazardous Location Certified Panel Shop. Five Star builds Custom or Standard Motor and Pump Control Panels for the Municipal, Industrial, Commercial and Irrigation markets. Packager of variable frequency drives and solid state reduced voltage starters. Electrical systems integrator requiring "Total System Responsibility" for all components. Fully engineered process control panels using a variety of PLCs and hardware.</p> |
|  | <p>Factory authorized and trained service provider for all major brands of low and medium voltage air cooled AC drives. Service and parts distributor for most major brands of power electronics and variable frequency drives. Authorized Parts Distributor for Siemens LDA and the former Ross Hill Controls companies for low and medium voltage. Custom integrator for Siemens LDA with field service and installation capabilities.</p> |
